

PNR Associates Ltd are extremely proud to be working with Nanopool, the world leaders in this field, as an approved installer of their multi-award winning range of products.

Liquid glass protective coatings

Welcome to the world of SiO₂ Liquid glass nano layering technology. Products which offer truly stunning characteristics.

Nanopool liquid glass protective coatings are ultra-thin layers of pure glass used to treat and protect metal, wood, plastics, ceramics, stone, & fibres (textiles).

So how does the nano coating work?

The liquid glass coating forms a highly durable, flexible, super smooth breathable layer, which will repel dirt and liquid and upon which bacteria will not grow. Almost all treated surfaces can then be cleaned with water alone, cutting out the need for cleaning agents and chemicals.

Do the products contain any harmful "nano" particles?

No

Does the coating change the appearance or texture of a surface?

No. The product is invisible to the naked eye and does not in any way alter the appearance or texture of a surface.

How long does the protection last?

The treatments are all highly durable. Although every environment is different we would expect hard surface coatings to last at least 6 months, possibly up to 3 years in some instances.

Some other key features and benefits of Nanopool Liquid Glass products

Food safe

Heat tolerant

(can be applied to ovens, fridges & freezers & wash basins)

NANOPOOL
for a better living

liquid glass protective coatings

plastic - glass - ceramic - metal - stone - fabric

Commercial uses & benefits

There are quite simply endless uses & benefits of the Nanopool Liquid Glass range of products within commercial environments. Here are just a few examples:

- o Floor protection for offices, retail outlets, hotels shopping centres
- o Graffiti protection
- o Floor, machinery & surface protection for factories & industrial sites
- o Surface protection for monuments & sculptures
- o Windscreen protection for vehicles
- o Fibre protection for carpets, workwear & mattresses

Companies already seeing the benefits of using Nanopool Liquid Glass include Kempinski Hotels, McDonalds (Austria), Aldi supermarkets, Spar food processing factories & Train companies in both Austria & UK (treatments both inside & out)
